## Safety information

**WARNING!** Read the safety precautions in this section before unpacking, installing, powering or operating this product.

The G-Wash is intended for professional use only. It is not suitable for household use. **Impropre a l'usage domestique.**

Review the following safety precautions carefully before installing or operating the fixture. This product must be installed in accordance with the applicable installation code by a person familiar with the construction and operation of the product and the hazards involved. **Ce produit doit être installé selon le code d'installation pertinent, par une personne qui connaît bien le produit et son fonctionnement ainsi que les risques inhérent.**

### Preventing electric shock

**WARNING!** Risk of electric shock.

- Always power off/unplug the fixture before removing covers or dismantling product.
- Ensure that the mains power is off when wiring the fixture to the AC mains supply.
- Ensure that the fixture is electrically connected to earth (ground).
- Do not apply power if the fixture is in any way damaged.
- Do not immerse the fixture in water or liquid.

## *Preventing burns and fire*

***WARNING!*** Take measures to prevent burns and fire.

- Install in a location that prevents accidental contact with the fixture.
- Install only in a well-ventilated space.
- Install at least 0.3 m (12 in.) away from objects to be illuminated.
- Install only in accordance with applicable building codes.
- Ensure a minimum clearance of 0.1 m (4 in.) around the cooling fans.
- Do not paint, cover or modify the fixture.
- Keep all flammable materials away from the fixture.
- Allow the fixture to cool for 15 minutes after operation, before touching it.

**CAUTION:** Exterior surface temperature after 5 min. operation = 55° C (131° F). Steady state = 65° C (149° F)

*Avoid personal injury*

***WARNING! Take measures to prevent personal injury.***

- Do not look directly at the light source from close range.
- Take precautions to prevent injury when working at height.
- Ensure that the fixture is always securely fastened with suitable hardware.
- For elevated installations, secure the fixture with suitable safety cables, and always comply with relevant load dimensioning, safety standards and requirements.

## Overview

The SGM G-Wash is a maintenance free, multi-environmental moving head luminaire. It is IP-65-rated and can operate in all kinds of weather.

It has a powerful LED light source with high output and a virtually unlimited color palette, a Fresnel lens, optical zoom, elliptical beam shaper and can easily be controlled by wired and wireless DMX.

The fixture also offers RFID / NFC, low power consumption and an expected lifetime of the multiple LED's of 50,000 hours\*.

\* At 70% of luminous output under the manufacturer's test conditions.

## Parts identification and terminology

- A : Pan lock
- B : Tilt lock
- C : Base handle
- D : Head fan grill (one of two shown)
- E : Display panel
- F : Safety wire attachment point
- G : Fuse
- H : DMX in
- I : DMX out
- J : Power in
- K : Power cord

## Preparing for installation

### *Unpacking*

Unpack the fixture and inspect it to ensure that it has not been damaged in transport.

The G-Wash is shipped with:

- User manual.
- One Neutrik TRUE1 power input connector, 2 m (78 in.)
- Two Omega brackets with 1/4-turn fasteners.

### ***Location/application***

The fixture is IP-65-rated and designed for use in wet locations. This means that it is protected from:

- Dust; to the degree that dust cannot enter the fixture in sufficient quantities to interfere with its operation.
- Lower pressure jets of water from any direction.

When selecting a location for the fixture, ensure that:

- It is situated away from public thoroughfares and protected from contact with people.
- It is not immersed in water or exposed to high-pressure water jets.
- It has adequate ventilation.

When using the fixture outdoors or in wet locations, ensure that:

- For wireless DMX or standalone operation: That the DMX out cable is properly attached to the DMX in connection.
- For cabled DMX operation: That the DMX out of the last fixture is properly sealed, in accordance with the IP65 requirements.

### ***Transportation***

Always use the supplied packaging for transportation and storage.

Release the pan/tilt locks when transporting the fixture.

Leaving the pan/tilt locks applied may cause damage to the fixture.

## Installation / Rigging

**WARNING!** Always secure elevated fixtures with a safety cable.

The G-Wash may be installed in any orientation.

Always use two Omega brackets to rig the fixture. Lock each bracket with both 1/4-turn fasteners. The fasteners are locked only when turned fully clockwise.

Always fasten safety cables between the load-bearing support structure and the attachment points on the fixture. The safety cables must be able to bear at least 10 times the weight of the fixture.

### CAUTION:

- Always use two safety wires.
- Min. safety wire gauge = 5 mm.
- Max. safety wire length (free fall) = 30 cm (11 in.)
- Make sure the slack of the safety wire is at a minimum.
- Never use the carrying handles for secondary attachment.

## ***Rigging process***

Start the rigging process by blocking the work area below, and make sure the work is performed from a stable platform.

- 1 Check that the clamps are undamaged and can bear at least 10 times the weight of the fixture. Check that the structure can bear at least 10 times the weight for all installed fixtures, clamps, cables etc.
- 2 Bolt each clamp securely to an Omega bracket with an M12 / ½" bolt (min. grade 8.8) and lock nut.
- 3 Align an Omega bracket with two 1/4-turns in the base. Insert the fasteners into the base and turn both levers a full 1/4-turn clockwise to lock. Install the second Omega bracket.
- 4 Working from a stable platform, hang the fixture on a truss, or other structure and tighten the clamps.
- 5 Install two safety wires that each can bear at least 10 times the weight of the unit. The attachment points are designed to fit a carbine.
- 6 Check that the pan/tilt locks are released (A and B). Verify that there are no combustible materials or surfaces to be illuminated within 0.3 m (11 in.) of the fixture.
- 7 Check that there is no possibility of head or yoke colliding with other fixtures.

## ***Locating the front of the fixture***

- When the fixture is standing on the base; the front is to the right when looking at the display.
- When the fixture hanging; the front is to the left when looking at the display.

## Connecting AC power

The G-Wash can operate on any 100-240V, 50/60 Hz mains power supply.

Connect the fixture to power using a cable with a Neutrik powerCON TRUE1 connector (supplied with the fixture).

(POI fixtures are supplied with a fixed-chassis mounted, bare-ended power cable for installation in, for example; an weather-resistant junction box.)

The fixture must be grounded/earthed and be able to be isolated from AC power. The AC power supply must incorporate a fuse or circuit breaker for fault protection.

| <i>Wire</i>   | <i>Color</i> | <i>Symbol</i> | <i>Conductor</i> |
|---|--------------|---------------|------------------|
|  | Black        | L             | live             |
|  | White        | N             | neutral          |
|  | Green        | ⏏ or ⏚        | ground (earth)   |

## Control panel operations

The display panel can be used to configure individual fixture settings, check the fixture's wireless status, firmware version and error messages. When the fixture is powered on, it boots and resets, before displaying the DMX start address.

### *Using the control panel*

- Press the 'UP' / 'DOWN' arrows to set the DMX start address. Confirm by pressing 'OK', cancel by pressing 'ESC'.
- Press the 'OK' button to enter a menu or make a selection.
- Press the arrow buttons to scroll up and down the menus.
- Press the 'ESC' button to take a step back.
- Press the 'UP' and 'DOWN' arrows simultaneously to flip the display orientation.

### *DMX start address*

The DMX start address is the first channel used to receive instructions from the controller. For independent control, each fixture must be assigned its own start address. If you give two fixtures the same address, they will behave identically. Address sharing can be useful for diagnostic purposes and symmetrical control.

Set a DMX address using the arrow buttons. See "Setting the DMX address" on page 21.

### ***Configuring the fixture using an Android device via RFID***

The G-Wash can also be configured wireless, via RFID, using the SGM Tool app installed on an Android device that has NFC support\*, App available in the Google™ Play Store.

\*(ISO 15693 and ISO 18000-3 mode 1 compatible, operating on 13.56 MHz  $\pm$ 7k Hz carrier frequency).

### ***SGM Tool App for Android***

The SGM tool application features the ability to, readout product information, setting DMX address, setting DMX mode. All functions can be accessed, changed and stored without having the fixture powered on.

Overview by tabs:

[INFORMATION] Product name, DMX address, DMX mode, Running hours, Serial number

[SET DMX ADDRESS] DMX address, Fixture size (DMX footprint), Fixture type, Fixture mode, Auto increase

First make sure the RFID/NFC is enabled on your device, then open the application and you are ready to scan a fixture.

### ***Getting fixture information using Android and RFID***

1. Scan fixture.
2. Informations about the fixture is shown including:
  - Product name/type.
  - DMX address and DMX mode.
  - Running hours and serial number.

### ***Setting a DMX address and mode using Android and RFID***

1. Scan fixture or press the menu button on the Android device and choose “Goto DMX addressing”.
2. Go to tab [SET DMX ADDRESS]
3. Select Fixture type, Mode and whichever you want to Auto increase the address for the next fixture
4. When all settings is correct, transfer/store the settings to the fixture by holding the device close to the fixtures RFID, when the screen goes green and a sound is played, the settings is transferred and stored.

## Connecting to a DMX control device

The G-Wash is controllable using a DMX control device and it can be connected using either a DMX cable or via the fixture's built-in LumenRadio CRMX wireless receiver system.

If using a cabled DMX system, connect the DMX in cable (with male 5-pin XLR plug) and out cable (with female 5-pin XLR plug) to the DMX data link. Terminate the DMX out cable of the last fixture in the data link. For outdoor installations, use only IP-rated XLR connectors suitable for outdoor use.

Connect both DMX in and DMX out cables in order to maintain the fixture IP65.

At the end of the DMX link use an IP-65 rated DMX terminator.

## Configuring the device for DMX control

### *About DMX*

The G-Wash can be controlled using signals sent by a DMX controller on a number of channels (which varies depending on the DMX mode that has been set).

The first channel used to receive data from a DMX control device is known as the DMX start address. Each G-Wash must have a DMX start address set. For example, if a fixture has a DMX address of 10 and it is in 3-channel DMX mode, then it uses channels 10, 11, and 12. The following device in the DMX chain could then be set to a DMX address of 13. If two or more DMX devices of the same type have the same DMX address, then they will mimic each other's behavior. Incorrect settings will result in unpredictable responses to the lighting controller.

### *Setting the DMX address*

The DMX address can be seen on the OLED display. To change the address setting, press the up and down arrows. When the desired address is displayed, press 'OK' to save the setting. For your convenience, the suggested DMX address of the next device is displayed to the right. Note that channel spacing is determined by the DMX mode.

See the "DMX protocols" on page 40 for DMX mode options.

## Using stand-alone operation

Stand-alone operation is where the fixture is not connected to a control device, but is preprogrammed with a series of up to 24 scenes, that play continuously in a loop. This program can be set to run by default whenever the fixture is started.

### **Manual control / Internal sequence editor**

The editor offers the ability to adjust all DMX parameters of the fixture. Each scene has its own DMX settings. Each scene has a definable fade-in time, for the transition from the previous scene, and a wait (static) time, each with a fade time up to 4000 seconds and a wait time up to 4000 seconds.

The 24 scenes can be preset directly from the editor using the control panel.

The editor can also capture DMX values from a controller utilizing the control-channel (See “DMX protocols” on page 40) or capture live DMX values directly using the editor on the fixture.

To set a single static scene, set the fade time of scene 2 to 0.0 seconds, this will keep the fixture running scene 1.

To set a sequence of less than 24 scenes, set the fade time of the scene after the last scene to 0.0 seconds, this will keep the fixture looping scene 1 to the scene before the scene with 0.0 seconds fade time.

The copy/paste function offers the ability to create replicas of a previous created scene.

Locating the editor:

- Press OK to enter the menu.
- Navigate to “Manual” and press enter.

## ***Editor***

In the manual menu the following options are available:

- Editor
- Run Program
- Stop Program
- Run on power on
- Capture DMX

## ***Using the editor***

In the “Editor” menu you have the following options:

- Scene - Press OK and choose a scene (1 to 24) confirm with OK.
- Wait Time - Press OK and set the wait time (0 to 4000 seconds) confirm with OK.
- Fade Time - Press OK and set the fade time of the selected scene (0 to 4000 seconds) confirm with OK.
- Copy Scene - Press OK to copy the selected scene to the clipboard.
- Paste Scene - Press OK to paste copied scene from the clipboard to the selected scene.
- Clear Scene - Press OK to clear the selected scene and set the default settings.
- All the controllable features will be listed below “Clear Scene”.

To change a value of a feature:

- Select the feature to change.
- Press OK and change the value.
- Confirm with OK.

Channels operating in 8 bit mode will allow you to set a value from 0 to 255.

Channels operating in 16 bit mode will allow you to set a value from 0 to 65535.

## POI Permanent Outdoor Installation

The G-Wash comes in a special POI version designed for permanent outdoor installation and is IP66-rated. POI versions are designed for use in maritime and offshore environments, as per the C5-M corrosion-resistance class.

### **Physical differences**

The POI version differs from the standard version by having fixed-chassis power and DMX cables and heavy-duty cable glands. The display, RFID and control panel have been removed.

### **Configuration**

The POI version is configured exclusively via RDM (Remote Device Management). DMX start address, DMX mode etc. are configured via RDM. See “RDM” on page 26.

### **LED indicator**

An LED indicator is located next to the power input cable. This LED indicator has two colors and three stages; on, flashing or off.

- Green static: Fixture is on and receiving DMX.
- Green flashing: Fixture is on and no DMX is received.
- Red flashing: An error message is stored, review via the SGM Service Tool. Contact SGM support for diagnostic help. See “Support hotline” on page 29.
- Off: Fixture is off or indicator LED is set to auto dimming.

### **Connecting DMX and AC power**

DMX in and DMX out are in the same cable. See description on the right. Power is wired as the standard version. See “Connecting AC power” on page 17.

| Wire  | Color  | Conductor       |
|---|--------|-----------------|
|  | Shield | Ground          |
|  | White  | DMX IN: Data -  |
|  | Red    | DMX IN: Data +  |
|  | Black  | DMX OUT: Data - |
|  | Yellow | DMX OUT: Data + |

# POI connection diagram

## RDM

The G-Wash features support for various RDM functions.

RDM (Remote Device Management) is a protocol enhancement to USITT DMX512 that allows bi-directional communication between the fixtures and the controller over a standard DMX line. This protocol will allow configuration, status monitoring, and management. See the table below for supported RDM functions.

The controller communicates with the fixtures to show only the available options for each RDM function.

| PID    | Actions Allowed | Name                        | PID    | Actions Allowed | Name                                 |

## Sensors

RDM enables various sensor readouts for remote device monitoring. See the table below for available sensors and sensor types.

| <b>Name</b> | <b>Sensor Type</b> | <b>Name</b>          | <b>Sensor Type</b> |
|-------------|--------------------|----------------------|--------------------|
| SMPS PCB    | Temperature        | CRMX Signal Strength | Other              |
| Pan PCB     | Temperature        | Humidity Base        | Other              |
| Tilt PCB    | Temperature        | Humidity Head        | Other              |
| Effect PCB  | Temperature        | Fan 1 LED RPM.       | Velocity           |
| Base        | Temperature        | Fan 2 LED RPM.       | Velocity           |
| Head        | Temperature        | Fan Base RPM.        | Velocity           |
| Red LED     | Temperature        | Fan Head RPM.        | Velocity           |
| Green LED   | Temperature        | Fan Zoom RPM.        | Velocity           |
| Blue LED    | Temperature        |                      |                    |
| Main PCB    | Temperature        |                      |                    |

## LED refresh rate (Frequency)

### ***About LED refresh rate***

When using LED lighting with cameras, flickering can occur due to incompatible frequency settings which means the LEDs and the cameras is not synchronised.

In order to avoid flickering and horizontal banding (rolling shutter) the refresh rate (frequency) can be adjusted in order to achieve flicker-free performance.

### ***Setting the LED refresh rate (Frequency) via DMX***

The G-Wash offers the ability to adjust the refresh rate (frequency) of the LEDs via DMX.

By utilizing the 'Control channel' (channel 16 in standard mode, channel 21 in extended mode).

See "DMX protocols" on page 40 for details.

The refresh rate can be set between 100,00 kHz and 1,41 kHz.

It is recommended to have the G-Wash configured to operate the default refresh rate by setting the 'Control channel' to 0 (0%) (factory default settings) by DMX whenever possible to maintain the best possible dimming performance.

The refresh rate settings are only active as long as the value on the 'Control channel' is hold. The value should be stored as a preset or as the default value for the 'Control channel' in the control device.

Be aware that the 'Control channel' is also used for fixture reset functions and DMX capture for the internal sequence editor.

When adjusting a custom value, you want to choose a frequency high enough to avoid flickering and/or horizontal banding (rolling shutter), but low enough to maintain a good dimming performance.

Since there are differences between camera models, exposure settings etc., the optimal refresh rate settings will differ. In order to achieve the best result, adjust the refresh rate through a preview monitor with a feed from the cameras.

## **Service**

There are no user-serviceable components in the fixture. Do not open the G-Wash, as doing so will likely damage its ingress protection (IP) rating. Consult your SGM dealer if the fixture operates abnormally, is defective or otherwise is in need of service or repair.

### ***Cleaning***

To obtain optimal performance, regular cleaning is essential. Cleaning schedules will vary greatly depending on the operating environment, and the installation should therefore be checked at frequent intervals within the first few weeks of operation to see whether cleaning is necessary. This procedure will allow an assessment of cleaning requirements in the particular installation environment. If in doubt, consult your SGM dealer for a suitable cleaning schedule.

Clean the G-Wash using a soft cloth dampened with a solution of water and a mild detergent. Do not use any product that contains solvents, abrasives or caustic agents for cleaning, as they can cause damage to both hardware, cables, connectors, plastic and painted surfaces.

To maintain adequate cooling, fans must be cleaned periodically.

### ***Setting the OLED display saver***

By default the OLED display dims down after a short period when the control panel is not in use, but it can also be set to turn off completely. Pressing any key will always turn on the display or restore it to normal brightness. To change the display saver, use the "Settings→Display Off" menu.

NOTE: To avoid the risk of display deterioration caused by long term use in permanent installations, it is recommended to use the "Settings→Display Off" setting.

### ***Support hotline***

SGM offers 24/7 technical support hotline. Worldwide: +45 3840 3840. US: +1 877 225-3882. [support@sgmlight.com](mailto:support@sgmlight.com)

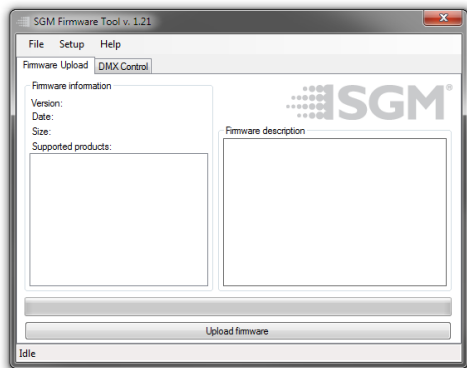

## Upgrading the firmware

The firmware currently installed on the fixture can be identified in two ways:

- 1 When powering on the fixture, the display will show the currently installed firmware.
- 2 Go to the MENU → INFO → SOFTWARE VERSION.

To perform firmware updates, use a Windows-based personal computer, the SGM Firmware Tool software (available on the SGM website, [www.sgmlight.com](http://www.sgmlight.com)) and a SGM USB 5-Pin-XLR upload cable (available from your SGM dealer).

Additionally, the Firmware Tool software offers a simple DMX controller featuring 512 DMX channels for test purposes.

We recommend that the fixture's firmware is always up-to-date. Visit [www.sgmlight.com](http://www.sgmlight.com) to download the latest firmware.

## Notes

1. 'Pre-heat' enabled = ready for instant operation.
2. 'Pre-heat' disabled = to perform a complete blackout, use 'Open 2'. This will take 400 milliseconds to exit.
3. All other channels must be zero and this has to be held for 30 sec. (fixture will wake up on a full reset).
4. Set LED frequency refresh rate, see separate documentation for frequencies, see manual for details value must be hold to keep setting (default value 1,41 kHz)
5. Hold for 3 sec to capture scenes for internal program (stand-alone operation) see manual for details.
6. Aperture settings can be set for two scenarios, optimized for maximum output and optimized for highest projection quality.

## Notes

1. 'Pre-heat' enabled = ready for instant operation.
2. 'Pre-heat' disabled = to perform a complete blackout, use 'Open 2'. This will take 400 milliseconds to exit.
3. All other channels must be zero and this has to be held for 30 sec. (fixture will wake up on a full reset).
4. Set LED frequency refresh rate, see separate documentation for frequencies, see manual for details value must be hold to keep setting (default value 1,41 kHz)
5. Hold for 3 sec to capture scenes for internal program (stand-alone operation) see manual for details.
6. Aperture settings can be set for two scenarios, optimized for maximum output and optimized for highest projection quality.

### ***Full Color Calibration***

The G-Wash features full color calibration when you mix colors to ensure uniform colors between products.

### ***Color Temperature Correction***

The G-Wash features seamless color temperature correction from 2000 Kelvin to 10000 Kelvin on channel 6 (in 24 channel mode) or channel 10 (in 30 channel mode). Choose a color temperature by setting a DMX value from 5 to 255. DMX value 0 sets the default color temperature (5600 Kelvin).

The fixture operates in RAW mode, when the DMX value is between 1 and 4.

## Effects

### ***Beam shaper***

The elliptical beam shaper is fully rotatable and indexable.

### ***Aperture***

The two different apertures enables the user to choose, optimized for maximum output or highest projection quality. Controlled via DMX.

### ***High-precision pan and tilt***

The G-Wash has a 16-bit pan and tilt control, with a 540° pan and 270° tilt movement with feedback.

### ***Ultra high-speed strobe effect***

The ultra high-speed strobe effect (1-50 Hz) introduces instant color control and the possibility to strobe between two or more colors at any speed. Random strobe and pulse effects can be generated with variable speed.

## Troubleshooting

| Problem  | Potential cause(s)   | Remedies   |
|--|--|--|
| Fixture does not respond or appears to be off. | No power to the fixture.   | Confirm that the power is switched on, confirm that the cables are plugged in and the TRUE1 connector is inserted and turned to its locked position. |
|  | Main fuse is blown.  | Contact SGM support or certified SGM service partner.  |
| Fixture suddenly turned off.                   | Power was turned off.  | Check the power supply, switches and breakers.   |
| Fixture suddenly stopped responding.           | The wireless transmitter or connections, was disconnected/tampered with.     | Inspect the wireless transmitter and connections or wired connections.   |
| Fixture operates irregularly / abnormal.       | DMX address is incorrect.  | Inspect and enter the correct DMX address.   |
|  | DMX cable polarization is inverted (pin 2 + 3).                              | Install a phase-inverter or replace cables.  |
|  | DMX link is not terminated.  | Install a XLR 120ohm DMX termination at the end of the DMX link.   |
|  | Corrupted DMX cable.   | Replace or repair defective cables and/or connections.   |
|  | The fixture operates an internal program.                                    | Go to MENU → MANUAL → STOP PROGRAM   |
|  | A corrupted/compromised fixture generates noise/disruptions on the DMX link. | Track and isolate the corrupted/compromised fixture.   |
| Pan, tilt skips/stutters.                      | Obstacles is within the required clearance of pan/tilt.                      | Inspect and remove any obstacles constraining free operation of pan/tilt.  |

| <b>Problem</b>                     | <b>Potential cause(s)</b>       | <b>Remedies</b>  |
|------------------------------------|---------------------------------|--|
| Pan/tilt does not reset correctly. | Calibration values are missing. | See calibration in the "Control menu" on page 31.<br>Contact SGM support or certified SGM service partner. |

## Fixtures and accessories

### *Included items*

Two Omega brackets with 1/4-turn fasteners  
2 m power cable with Neutrik TRUE1 power connector (Not POI)  
User manual
